Signage Innovations

Macer Interior™

Unleash Your Creative Potential with Slim-Panel Signage System

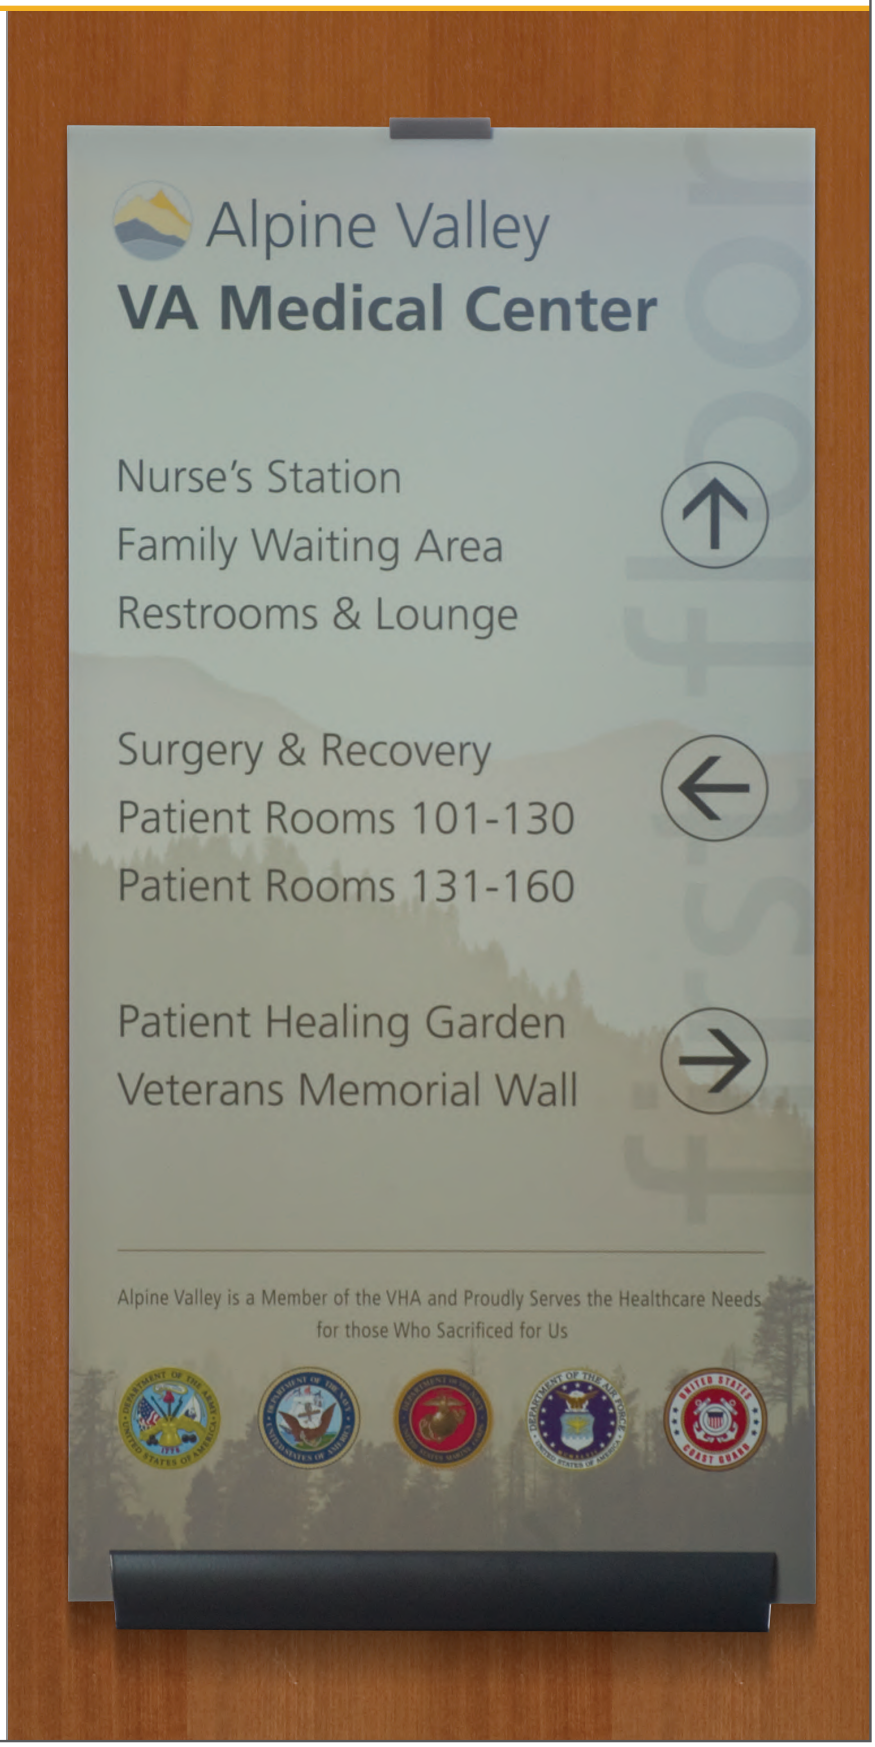
Macer Interior™ provides the freedom to unleash your creative ideas and achieve a precise look within the comfort and functionality of a modular system. Macer Interior™ consists of three components: a uniquely-designed panel holder, aluminum or etronite graphic panel, and a discreet top fitting that is used for large panels or PaperFlex™ signs. When coupled with Macer Exterior™, the system creates a seamless wayfinding signage solution from the outside to the inside.

Macer Interior™ allows for the full integration of photorealistic digitally printed graphics and ASI's standard selection of paint finishes to create a interior signage solution that is as unique and distinctive as the architectural environment where it will be used. Printing directly to the panel gives designers the freedom to integrate bold or subtle design features to communicate wayfinding and brand identity while ensuring the signage complements the architectural environment.

- Versatile sign system includes seven standard sign types
- Aluminum graphic panels or optional etronite panels available
- ADA-Ready™ panels and PaperFlex™ panels are standard
- PaperFlex™ panels are lockable and easy to update
- Digitally printed photorealistic graphics printed direct to the panel
- ISO 9001 manufacturing process
- Two year warranty on parts and labor

Sustainable Innovations

The Macer Interior™ signage system is a durable solution with modular functionality, which ensures that the system can be easily updated or repaired. Macer Interior™ is mounted using mechanical fasteners and screws which eliminates adhesives or glues. The components can also be easily disassembled and sorted into appropriate recycling processes at end-of-life.



Modular Product Solutions

Standard Features

- Panel holder comprised of two angled aluminum extrusions and countersunk screws that apply pressure to the graphic panel
- Internally fitted rubber gasket grips the panel and secures the panel in place
- Panel holder and top fitting are finished in dark grey metallic paint
- High temperature cured polyester paint finish available in 140 standard paint colors, one per sign with multiple and custom colors available
- 2-year production warranty on all parts

Graphic Panel Material Options

- 0.118″ (3mm) thick aluminum panels
- 0.118″ (3mm) thick etronite panels
- Etronite material cannot be painted -- use full-panel face print on panel graphics for etronite-based signs

Graphic Methods

- Full-panel face print on panel graphics capability
- 720 dpi, seven-color print system, including white ink
- Small, vector artwork details can be used for logos, layouts and watermark decorations
- Capital heights of printed text can be 0.08″
- Printed gloss, matte and texture effects available

Floor Stand

- Aluminum graphic panel with an extruded polycarbonate core
- Standard widths: 32.5″ (827mm)
- Standard height options: 32.5″ (827mm), 32.5″ (827mm), 65.5″ (1660mm), 49″ (1244mm)
- Graphic panels are made from 0.75″ (19mm) aluminum sandwich construction with a hollow polycarbonate core
- Heavy floor stand base is covered

Desk Sign

- 4.25″(h) x 6″(w) or 108mm x 150mm
- Choose from aluminum or etronite material

Wall-Mounted Graphic Panel Sign

- 29 standard sizes available
- Panels measuring 11.8″ high (300mm) and higher require top fitting
- Choose from aluminum or etronite material

Wall-Mounted ADA-Ready™ Sign

- Screen-tipped InTouch™ photopolymer
- Panels measuring 11.8″ high (300mm) and higher require top fitting
- ADA-Ready™ panels cannot receive print on panel graphics but can receive LTV series vinyl accents

Wall-Mounted PaperFlex™ Sign

- Dual 0.118″ (3mm) acrylic panels hold paper insert
- Top fitting required to hold panels together
- When the top fitting is pushed up, the panel holder acts as a hinge so that the two panels can be opened sufficiently to update the insert
- Top fitting for PaperFlex™ signs includes a hidden magnetic locking system
- Computer generated printed inserts using Microsoft® Word® compatible templates available
- European and U.S. Standard paper sizes available

Suspended Sign

- Choose from aluminum or etronite panel material
- Extruded aluminum attachment bracket
- Suspension: stainless steel or nylon cable system
- Nine standard heights available based on four panel widths: 17″ (432mm), 23.5″ (595mm), 32.5″ (827mm) and 49″ (1244mm)

Projecting Sign

- Choose from aluminum or etronite panel material
- Extruded aluminum attachment bracket
- Four standard sizes available:
  - 6″(h) x 6″(w) or (150mm x 150mm)
  - 6″(h) x 8.5″(w) or (150mm x 216mm)
  - 8.5″(h) x 8.5″(w) or (216mm x 216mm)
  - 12″(h) x 12″(w) or (300mm x 300mm)
