

Precision Machined Tactile Graphics and Grade II Braille

InTac™ is an ADA-Ready™ sign created on a wide variety of substrates by applying computer cut tactile lettering and raised graphics and inserting machined and pressed Grade II Braille. Because InTac does not use a photopolymer material substrate, the sign can be made from diverse materials such as wood laminates, clear and frosted acrylic, and metal interior rated substrates.

- Subsurface silkscreen or digital printed graphics
- Computer cut, surface applied tactile letters and graphics
- Machined and pressed Grade II Braille
- Custom profiles and edge details
- Wide variety of substrates

Standard Features and Options

- Interior rated
- Highly flexible material options
- Surface and subsurface graphics
- 140 standard paint colors with multiple and custom colors available
- Updatable window inserts
- Installation Options
 - Mechanical or VHB tape mounting
 - Partition mounting
 - Stand-off mounting for modular applications

Wall-Mounted Signs

- Size and thickness determined by substrate material
- Can be combined with frames or window inserts
