

“It’s Like Having a Trusted, Knowledgeable Project Manager, Available 24/7/365...”

That’s the kind of feedback we get from clients once they run a multi-facility signage implementation through ASI’s Global Account Management (GAM) system.

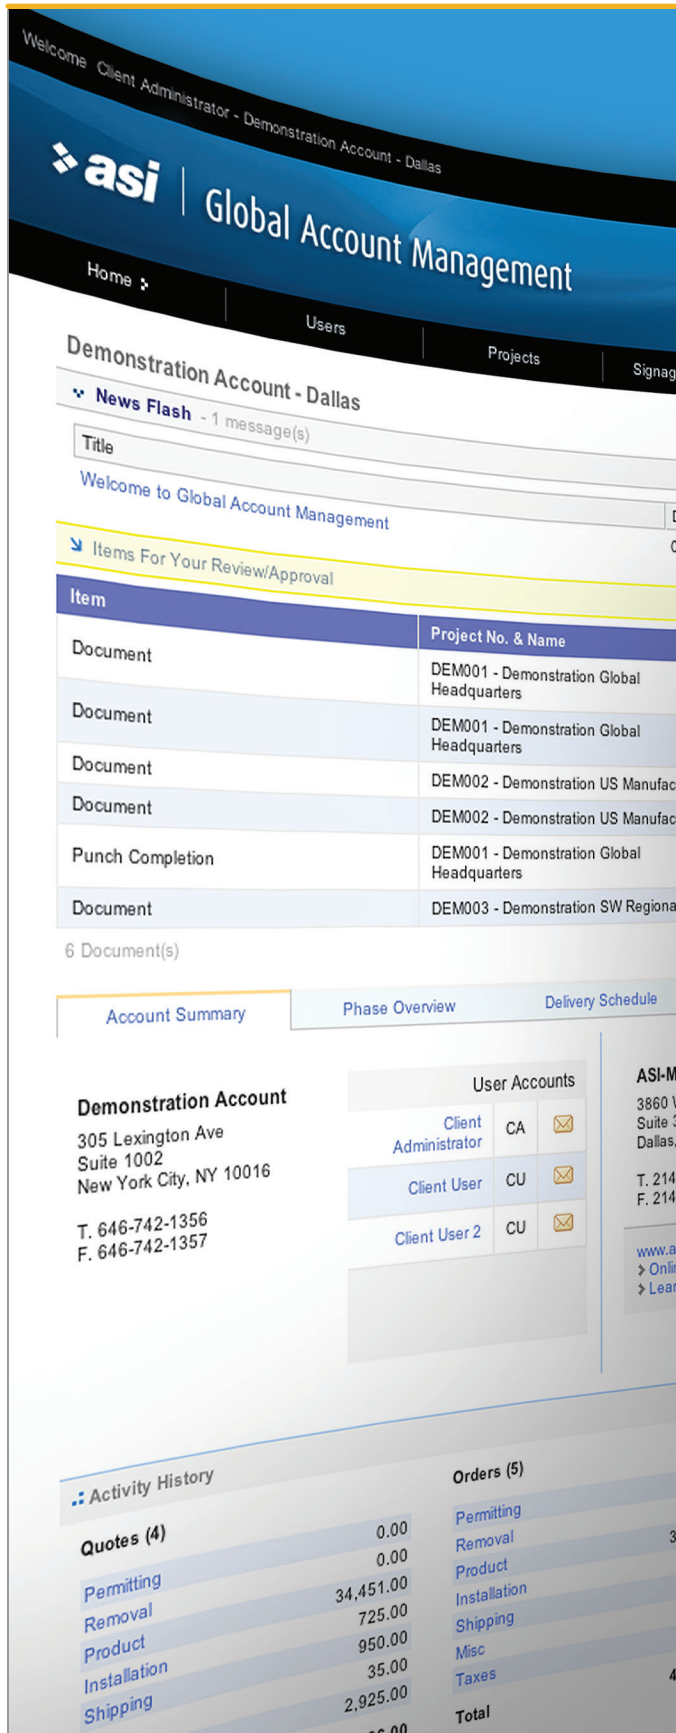

GAM, which is exclusively offered by ASI, documents all aspects of highly complex projects and organizes the information into a single centralized system for our project management team and our clients to access any time. The system provides real-time access to overall program progress, project status and the ability to drill down for specific project site documents and data. GAM provides an efficient means of transferring information and approvals throughout the program.

GAM facilitates the complex management of large-scale projects, by providing a single, real-time data portal for accessing all of the information about a project. The client can view global or location-specific implementation activity including quotes, orders, invoices, delivery schedules, signage catalogs and project specific documentation about a program and its individual sites.

A demonstration of the system’s capabilities is available on request.

Features and Capabilities of GAM

- Centralized project management
- Track multi-project activity and history
- Keep all parties informed
- View budget status
- Bind files to projects and share with specified groups
- View delivery and installation schedules
- Quick summary and access to quote, order and invoice history
