

Venus Extrusion Panel System

ASI's flat Venus extrusion panels can be used to complete and complement any interior architectural signage solution. They can be used as cubicle signs, wall-mounted identity signs, updateable window signs, desk/table signs and as part of a donor recognition wall or system within a facility. For cubicle signage solutions, the Venus extrusion panels can be mounted to the cubicle partition wall with one of our standard cubicle sign fittings or pin applied or applied to a custom cubicle hanger bracket that fits the cubicle wall.

Some facts about the Venus Extrusion Panels:

- Flat-face with changeable inserts
- Can be used with regular Venus panels to complete or complement a project
- Clear anodized silver finish is standard
- Non-standard anodized finishes of gold, red, blue or black available
- Signs with a 1/4" thickness are available in numerous sizes
- Signs with a 1/6" thickness are also available in various sizes
- Signs can be cut to various shapes as requested
- The clear cover for the insert is available in 0.078" (2mm) or 0.157" (4mm) thickness
- Panels can be decorated with LTV series vinyl appliques, or print on panel technologies
- Various braille application methodologies are possible
- Can be decorated with the patented Mirtec Accent Bar
- Option of having a set screw lock to hold clear lens in place

Available in the following standard sizes:

- 5" x 6" at 1/4" thickness
- 3" x 6" at 1/4" thickness
- 4" x 6" at 1/6" thickness
- 4" x 4" at 1/6" thickness
- Custom widths available
