

Unmatched Durability

InForm is manufactured through a process of thermoforming which provides crisp, clean edges and graphic detail in a single-piece sign. Combined with integral colors, finishes and fingerprint-resistant surface texturing, the technology offers a wide range of design flexibility.

The product's performance lies in its composition — made from an impact and flame-resistant, thermoplastic alloy used to manufacture a wide range of aircraft and medical equipment enclosures. InForm is an ideal solution to meet the most demanding needs in any school, hospital, or government office environment.

- Fingerprint and graffiti resistant stipple surface texture
- Integral raised text and graphics, Grade II Braille and surface textures
- Class 1/A fire rating available
- Clear and translucent material available
- Stipple, matte and slate surface textures available
- Custom sign profiles available
