

Precise Registration

PerFORM™ modular signage system provides a flexible platform of sign types capable of meeting the complete needs of your signage program or extending the capabilities of your existing system by providing an innovative canvas for unique branding and messaging applications. PerFORM is a precision-engineered, architectural signage system that is dimensionally and functionally compatible with existing grid-based products. An underlying perforated grid provides a variety of flexible benefits and functions. In addition, the system provides a rigid structural platform to align a limitless configuration of side-by-side, snap-together panels or floating shapes that can fit within the architecturally-precise parameters of the grid, or extend beyond the edges into the surrounding space. Frameless panels may entirely conceal the support grid, offering an elegant and contemporary, floating appearance. The system is proudly Made in the U.S.A. providing for reduced lead-times for samples, program delivery, and supplemental signage required as your facility experiences change.

- Wide variety of standard components and accessories with custom options
- Full-face print on panel graphics available
- All grids, ADA-Ready™, graphic and acrylic panels available in custom sizes and colors
- One year warranty on parts and labor

The PerFORM™ signage system is a durable, modular solution, which ensures that the system can be easily updated or repaired. The components can also be easily disassembled and sorted into appropriate recycling processes at end-of-life.

Modular Signage Solutions
